What is the Difference Between EN 10204 3.1 and 3.2 ...
The standard has been published in 10 parts: EN 3-1: Portable fire extinguishers. Description, duration of operation, class A and B fire test. EN 3-2: Portable fire extinguishers. Tightness, dielectric test, tamping test, special provisions. EN 3-3: Portable fire extinguishers. Construction, ...

EN 3 - Wikipedia
A 3.1 certificate is issued by an authority which is independent of manufacturing and is validated by the manufacturers authorised inspection representative. It is equivalent to the "old" 3.1.B certificate. This is an inspection certificate according to EN 10204:2004 that declares the 'metallic products' are in compliance with the order requirements and supply test results.

3.1 Material Certificates | Classic Filters
A 3.1 certificate relates to an inspection certificate that is given for products that have been tested in accordance with DIN-EN-10204 (see the links below). For specific information on what information needs to be in the certificate you will need to refer to the standard (second link).

what is 3.1 certificate - ENGINEERING.com
For any metallic materials 3.1 certificates needs to show heat number, required test results, applicable standards etc. In this case for electrodes, they can send you raw material test results for each batch (heat), but if you need after welding condition they need to make sample weld and test it. It is relative what you need it for.
