Bug 14. The damping effect of the 3D Spring-damper element with the internal solver is incorrect when it's not aligned with the global axes. Bug 15. Displacement defined by a function of position on an offset shell element uses the positions of the element's nodes rather than their offset positions to calculate the displacement. Bug 16. Bug 18.

Mecway - Finite Element Analysis

Overview of Mecway This chapter introduces you to the Mecway work-flow for accomplishing your finite element analysis. 2.1 Mesh A finite element mesh consists of nodes (points) and elements (shapes which link the nodes together). Elements represent material so they should fill the volume of the object being modeled. The mesh is
